

## WATER METERS and INSTALLATION

The estimated/anticipated costs of installing a second water meter for outside water use are as follows:

Cost of Plumbing Permit:	50.00	
New 5/8" Diameter Meter:	135.00	
New 1" Diameter Meter:	200.00	
Spacer Bar Deposit:	100.00	(Deposit returned when spacer bar is returned within 72 hours)

ALL outside hose bibbs and lawn-sprinkler systems **MUST** meet the State of Michigan rules and regulations on cross connections.

For outside water use on a second meter, only **ONE** outside faucet is permissible. **MORE THAN ONE FAUCET IS ALLOWABLE IF THE PLUMBING IS VISIBLE.**

The Plumbing Permit and water meter **MUST** be paid for at the same time.

**NO** water shall be used on this new line until the water meter is installed.

The Plumbing Permit fee is based upon a new connection placed next to the existing water meter with a new gate or ball valve (ball valve preferred) and new water meter along with the necessary water piping to **ONE** outside wall where a hose connection (with back flow preventor) is placed outside the house for outside watering use.

There is no sewer charge on a meter for outside water use, but there is a minimum bill even when no water is used.

**ALL** fittings before the meter are to be flared or brass I.P.T. – **NO SWEAT OR GALVANIZED FITTINGS ARE ALLOWED.**
